Research Interest

I study how to improve the alignment and reasoning capabilities of large language models through post-training and inference-time methods, with a particular interest in reinforcement learning, verifiable rewards, and test-time scaling. I am especially interested in developing reliable and efficient inference strategies that remain robust to imperfect reward models and verifiers.

Education

Mar.2021~Present	Seokyeong University • Department of Electronics & Computer Engineering (AI Track) • Total GPA : 3.9 / 4.5 • Major GPA : 4.22 / 4.5	Seoul,Korea
------------------	---	-------------

Publications

2026	Changmin Jeon, Hayeong Ryu, Youngwan Cho “Attention-based Pairwise-Semantic Fusion for YouTube Clickbait Detection” Manuscript submitted to International Journal of Fuzzy Logic and Intelligent Systems, Public release 2026.
------	---

Research Projects

2026 ~ Present	Comparing Reward Hacking Mitigation Strategies for Best-of-N • Unified comparison of EM-regularized BoN, χ^2 -regularization, caution-penalty BoN, and InfoRM
2026	Value-Guided Backtracking (VGB) Reproduction • Independent reproduction of “Taming Imperfect Process Verifiers” on all five tasks

Internships

Jun. 2026 ~ Sep. 2026	Research Intern at POSTECH Interactive Machine Learning Lab, Korea
Jul. 2025 ~ Mar. 2026	Research Intern at AI Consulting Center, Institute of University Evaluation, Korea • RAG Database Construction & Data Preprocessing for AI Chatbot Solution
Mar. 2025 ~ Present	Research Student at Robot and Control System (RACS), Seokyeong University, Korea • Paper Review Seminar

Awards

- | | |
|-----------|--|
| Mar. 2026 | • Scholarship for academic excellence |
| Sep. 2025 | • Scholarship for academic excellence |
| Mar. 2025 | • Scholarship for academic excellence |

Others

- | | |
|-----------|---|
| Jan. 2025 | Hansung University Winter IT Bootcamp
• Algorithm Coding Test Track Algobears |
|-----------|---|
